

Multi Split

Residential
air to air solutions

Residential air-to-air heat pump **solutions** according to your customer's needs

8 reasons to buy a Daikin (multi-)split system

Best performance and **highest energy efficiencies** in cooling and heating

Best comfort throughout the year, thanks to the **intelligent sensors** and **airflow techniques**

Reliability thanks to **best technologies** and **service**

Connectivity: remote monitoring and WLAN available

Multi connection up to **5 ports**

Top indoor air quality through **unique filtration**

Highest quality standards: from parts to production

Iconic and **award-winning** design

Why choose Multi?

Your customer wants to **keep the existing boiler, but reduce the gas consumption.** Your customer wants a sustainable heating system, while only using gas for water heating.

Your customer's house:

- Up to 5 rooms to be heated/cooled
- Located in a warm or average climate region
- Any number of inhabitants
- A single or multi family house

Legend
Connect Multi outdoor unit
with up to 5 indoor units

1 | Flexibility

There are many possibilities in comfort you can profit from a multi split solution:

Up to **5** indoor units connectable to **only one** outdoor unit

Every single indoor unit can be **regulated separately**

Choose from a **greater variety** of connectable indoor unit types out of our split and Sky Air series

Use **low capacity** indoor units specially designed for small rooms which can only be connected to a multi split system

Are you planning an additional indoor unit later on? Just **decide now** for an outdoor unit with higher capacity and simply **connect it later**.

Optimization of
space heating

Customer needs
Heating | Cooling

2 | Efficiency

Our durable compressors can work very efficiently thanks to the inverter principle. Only the necessary capacity is produced according to the number of indoor units that are switched on. With efficiencies up to A+++^(*) in heating, your customer can drastically reduce the gas energy bill and only use the gas boiler for producing hot water.

^(*) Perfera C/FTXM-A in combination with 3MXM52A(9)
For exact combinations, please refer to the multi specifications on p. 373

Quickly reduce on the energy consumption

Add a multisplit system and photovoltaic solar panels to an existing gas boiler and save on your energy bill.

In spring and autumn, simply turn down the radiators or room thermostat. The multisplit will be perfectly capable to cover the full demand.

In the heart of winter, open the radiators and have them work complementary with your air-to-air heat pump, as they will act as a secondary heat source when needed.

3 | Easy installation, piping and wiring

Wherever you want to place an outdoor unit, for every unit you will need correct mounting equipment for a secure fixing and problem-free operation. The physical installation, wiring, drain piping as well as the initial setup of only one system is easy and fast.

4 | Full comfort offering heating AND cooling

Adding a multi system to the existing gas boiler, saves energy and offers a high level of comfort. And as a plus, not only heating but also cooling is offered with high efficiencies. But if needed, the heat lock mode exists to block the system to only operate in heating mode.

5 | Control your units, wherever you are

All indoor units are individually controllable with their supplied remote control or via the Onecta app. The Daikin Onecta app enables scheduling, controlling and monitoring of each air-to-air heat pump unit also via voice control. Onecta is compatible with Amazon Alexa and Google Assistant.

6 | Limited mounting space, low sound

Limited mounting space

The multi outdoor unit is very compact, which can be installed in different ways (on the wall, on a terrace, in the back of a garden, etc.).

Low sound

Multi outdoor units are standardly very quiet, down to 46 dBA, similar to a dishwasher. Additionally, the Night Quiet Mode function reduces operating noise of the outdoor unit at nighttime, based upon your schedule.

Did you know a special software is developed on a range of outdoor units* to lower the sound level at all times if required by legislation.

Less is More

Multi Split

Simply extend you comfort!

A Daikin multi split system offers you unexpected possibilities in creating a comfortable and cosy home. This is your solution to reduce limitations like environmental impact and financial aspects.

Less mounting space, less visibility, less sound

- **Save space:** Drastically reduce the space required for placing a number of units on your facade
- **Less visibility:** Enjoy your nice ambience. Finding just one hiding place is much easier
- **Less noise:** Only one unit in operation is much quieter than two or more units

Lower power consumption, high efficiency

- **Less power consumption:** Our big compressors can work more efficiently than various smaller ones with the same capacity in sum. Also save a significant proportion of energy thanks to standby mode

Pair split or multi split combination –
the direct system comparison

Conventional pair split
installation for
air-conditioning three rooms

Solution for the same
situation with only
one multi split outdoor unit

Easier installation, wiring, piping and maintenance

- **Save mounting equipment:** Wherever you want to place an outdoor unit, for every unit you will need a mounting for a secure fixing and problem-free operation
- **Save time:** The physical installation, wiring, drain piping as well as the initial setup of only one system is much easier and faster
- When using only one outdoor unit instead of two or more, the statistical probability of a **possible technical defect is reduced** with every unit that you do not need

More flexibility: Connect up to 5 indoor units of any style

There are many possibilities in comfort you can profit from a multi split solution:

- **Up to 5 indoor units** connectable to only one outdoor unit
- Every single indoor unit can be **regulated separately**
- Choose from a **greater variety** of connectable indoor unit types out of our split and Sky Air series
- Use low capacity indoor units specially **designed for small rooms** which can only be connected to a multi split system
- Are you planning an **additional indoor unit later on?**
Just decide now for an outdoor unit with higher capacity and simply connect it later
- Have more than 5 rooms to connect? Our VRV systems provide the solution, find out more in the VRV chapter

Ceiling suspended unit

For wide rooms with no false ceilings nor free floor space

- Combining with Sky Air Advance-series ensures good value for money for all types of commercial applications
- Ideal for comfortable air flow in wide rooms thanks to Coanda effect: up to 100° discharge angle

- Even rooms with ceilings up to 3.8m can be heated up or cooled down very easily without capacity loss
- Can easily be installed in both new and refurbishment projects
- Can easily be mounted in corners and narrow spaces, as it only needs 30mm lateral service space

- Reduced energy consumption thanks to specially developed DC fan motor
- 5 different fan speeds available for maximum comfort
