

6 reasons to choose an air purifier

Combat seasonal allergies & reduce airborne illnesses
Air purifiers filter out pollen, dust mites, and other allergens, providing relief from sneezing, itchy eyes, and congestion

Ideal for young families
Kids and babies can be the most vulnerable. Ensure a healthy environment with air purifiers that remove harmful pollutants, dust, and pet dander. Quiet operation makes them perfect for nurseries and children's rooms.

Banish bad smells
Remove cooking, smoking and household smells with a deodorising filter. Enjoy a better smelling home, even in open-plan living areas and homes with limited ventilation.

Get rid of the household dust
Dust is a common challenge for every household. This dust can contain particles like pet dander, mould spores, and dust mites. Consider using an air purifier to reduce these airborne irritants in areas where dust tends to accumulate.

Minimise pet smells and dander
Reduce pet hair, dander, and odours with an air purifier. It will help to keep your home cleaner and alleviate allergic reactions if you're sensitive to pet allergens.

Improve the quality of your sleep
Remove airborne irritants, and an air purifier with an add-on feature of humidification gives you the best moisture level while you are sleeping, so you're less susceptible to a dry throat that causes coughing while sleeping

A Daikin air purifier offers many solutions:

An electrostatic HEPA filter removes 99.97% of fine particles down to a size of 0.3µm

The deodorising filter absorbs and decomposes odour.

Daikin's Streamer technology decomposes, by oxidation, harmful substances caught on the filter

A humidifying filter can add moisture to the air to achieve desired moisture levels.

What makes Daikin air purifier unique?

Supreme Technology

Our air purifiers are designed with minimalistic style in mind, so they won't detract from the aesthetics of your home. The sleek, modern design is sure to complement any décor, while the lightweight construction makes them easy to move around.

Featuring clear indication lights that show you the current PM2.5 indication additionally with an easy-to-use control panel with all the settings you need. Our air purifiers are also designed to be quiet, with low noise levels and minimal disruption.

There when you need it

Our air purifiers are designed to keep your air clean and comfortable all year round.

Daikin Streamer Technology

Our Daikin air purifiers are all equipped with our patented Daikin Streamer technology to decompose, by oxidation, harmful substances caught on the filter and ensuring its market leading filter lifetime of ten years.

Peace of mind thanks to filter lifetime

A benefit that makes our Daikin air purifiers unique.

The filters of our air purifiers last much longer than market standard, and ensures you of 10 years without replacing the filter.

This saves you costs and ensures you peace of mind for a 10 years* period.

What makes our technology unique?

Technology

① Inside - Streamer decomposes hazardous elements

Streamer, a type of plasma discharge, decomposes hazardous chemical substances. The decomposition power is comparable to thermal energy of about 100,000°C.

② Outside - Active plasma ion discharge

Plasma ion technology releases ions into the air by plasma discharge and combines them with components in the air to generate active components such as OH radicals with strong oxidising power. They attach to the surface of fungi and allergens and decompose proteins in the air by oxidation.

The Streamer Symbol consists of three C's

CATCH

The dust collection filter catches the floating substances with the attached harmful gases and Streamer decomposes the gases by oxidation.

CYCLE

The deodorising filter absorbs and decomposes odour. Thanks to the regeneration of the adsorbing capacity, the deodorising capacity is maintained. No need to change the deodorising filter.

CLEAN

Removes bacteria from dust collection filter, humidifying filter and humidifying water tray.

Mechanism of decomposition by Streamer

Streamer emits high-speed electrons.

The electrons collide and combine with nitrogen and oxygen in the air to form four kinds of elements.

These elements provide decomposition power.

*1 This is removal performance of filter and not removal performance for entire room.

*2 Verified by test method based on Japan Electrical Manufacturers' Association Standard JEM1467.

No hassle with periodic filter replacements

No maintenance costs for at least **10 years**

One of the **most silent**
Enjoy whisper-quiet operation: only 19dBA.

Filter Lifetime

Our air purifiers feature a complete filtration system, with four stages of filtration to ensure your air is as purified as possible. With our air purifiers, you can enjoy the benefits of cleaner air, with minimal maintenance.

1. Pre filter

Our air purifiers feature an advanced pre-filter that helps to reduce the amount of pollutants that reach the main filter, which helps to extend the life of the air purifier and improve performance.

2. Electrostatic HEPA filter

High Performance Electrostatic HEPA Filter is a high-efficiency particulate air filter system that is designed to catch fine particles of dust.

3. Deodorizing filter

Our air purifiers feature a powerful deodorizing filter that helps to reduce odours from cooking, pets, and other sources in the air.

4. Humidifying filter

Our air purifiers feature a built-in humidifying filter that helps to add moisture to the air. This filter helps to keep the air from becoming too dry, which can cause issues such as skin or throat irritation from dry air. Please refer to product pages to check which units offer humidification.

What makes Electrostatic HEPA better than Non-Electrostatic HEPA filter

- Removes 99.97% of fine particles of $0.3\mu\text{m}$.
- Filter fiber itself is charged with static electricity, and collects particles efficiently.
- Doesn't clog easily, hence causes low pressure loss.

VERSUS

Because it catches particles relying only on mesh size, it is necessary to make mesh finer, making it easy to be clogged and cause high pressure loss.

Powerful Air Purification MC30Y

- Effectiveness against respiratory viruses evaluated by Institut Pasteur de Lille
- Air treatment up to 46m²
- Pure air thanks to Daikin's 'Catch and Clean' approach
- No need to change filter for 10 years thanks to high performance electrostatic HEPA filter
- Whisper quiet operation (19 dB(A))

Mode

Turbo mode	•
Quiet mode/sleep mode	•

Functions

Catch & clean	•
Deodorizing filter	•
Child proof lock	•
Brightness adjustment	•
Auto restart after power failure	•

Specifications

Technical specifications		MC	MC30YV
Applicable room area			23(1)/46(2)
CADR		m ³ /h	180
Weight	Unit	kg	5.8
Dimensions		mm	565/350/345
Colour			White
Air flow rate	Air purifying operation	Silent/Medium/Turbo	m ³ /h
Sound pressure level	Air purifying operation	Silent/Medium/Turbo	dBA
Air purifying operation	Power input	Silent/Medium/Turbo	kW
Power supply	Phase/Frequency/Voltage		1~/50/60/220-240/220-30

- Air flow up to 180 m³/h
- Air purification up to 45 m²
- Absorbs odour via deodorising filter
- High Performing Electrostatic HEPA filter
